Reviewer Roles

1. Communicate with the editors or secretariat (when necessary)
2. Review the Abstract and providing grade based on the suggested criteria and providing comments (when necessary)

Account Management : Log in

IAHRAPD2018 login menu is on

<http://iahrapd2018.ugm.ac.id/>. You can input your Email Address & Password and click the **Log In** button.

The image shows a screenshot of an email invitation on the left and a login form on the right. The email is from the Local Organizing Committee, inviting colleagues to the 21st Congress of the Asia Pacific Division of the International Association for Hydro-Environment Engineering and Research (IAHR-APD) in Yogyakarta, Indonesia, from September 2nd to 5th, 2018. The login form on the right includes a search bar, a 'Login' button (highlighted with a red box), and links for 'Create new Account' and 'Request new Password'.

Invitation

Dear colleagues,

We cordially invite you to join the 21st Congress of Asia Pacific Division of International Association for Hydro-Environment Engineering and Research (IAHR-APD) to be held in Yogyakarta, Indonesia, on 2nd – 5th September 2018. The theme of the congress is: "Multi-perspective Water for Sustainable Development", which I believe may inspire us in sharing the Hydro-Environment related knowledge and experiences towards the effective and efficient ways to elevate the community welfare.

Your efforts to disseminate this information to the related networks are highly appreciated.

Thank you and looking forward to seeing you in Yogyakarta, Indonesia.
Sincerely yours,

The Local Organizing Committee
Radianta Triatmadja

Title of Abstract The impact of flood-detention basin on flood propagation in the Huaihe River

Type of Presentation Poster

Flood-detention basin is a unique hydraulic facility in the Huaihe River, which has the functions of both storing flood and detenting flood. In the upper reach of the Huaihe River, it can be used as a reservoir to reduce peak discharge. On the other hand, it can expand the flooding cross section to accelerate discharge. It is estimated that there are 17 flood-
